

VANTAGE iPhone APP

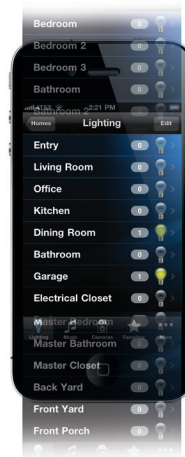

www.vantagecontrols.com/app

Transform your Apple® devices into fully mobile touchscreens for Vantage home entertainment and lighting systems using an iPhone, iPod touch or iPad. By connecting via Wi-Fi or via the 3G network, you can set lighting levels, whole-home scenes and room temperature, control HD video sources, or adjust volume and view surveillance camera feeds for multiple locations in real time. Simply download the app from the iTunes store, install it on the desired iPhone and have your dealer connect the app to your network so it can read the Vantage system information. This method gives you complete control as it requires little design work by the dealer or installer. Easily choose which keypads, lights, scenes, audio zones and thermostats you see and the command of the home is yours. By combining your most used actions into a favorites screen, the convenience you love with Vantage is ready to go with you anytime, anywhere.

Rock On.

Browse and search Vantage music collections with natural flick gestures. Scroll through albums, artists, genres, playlists and internet radio stations, as well as see what each room is playing and change sources.

Create The Mood.

Simply touch the screen to set lighting levels, whole-home scenes and room temperatures. The ability to view multiple pages gives you the flexibility to control as many lights as you need to have complete access to your home.

Rest Assured.

Quickly view surveillance cameras to ensure family and property safety in real time while you're away. If you're at home and far from the door, glance to see who is visiting or check the kids in the pool to provide an extra measure of safety and convenience.
